1. Colour coding

The combination of division and colour code assigned here (or as amended in any future Supplement) is the registered classification, to be observed, for example, when schedules require cultivars to be shown "as registered". The registered classification is not altered by any note of variable measurement or colour. (See p26 for any notes of variability in previous registrations)

2. Colour coding guidelines

Guidelines on colour coding including those on distinguishing between Yellow and Orange and between Orange and Red appear in the Register and on registration forms. It is at the registrant's discretion to distinguish White from Yellow or Green, Yellow from Green, or Pink from the paler tones of Orange or Red.

In addition:

3. Green at the base of a corona

The green at the base of a corona, whether in the tube or in the corona itself, may be included in the colour code if it is prominent and plain to see. Registrants are advised to include it only if it is consistent from year to year.

4. Coding colours in perianth or corona

When coding colours in perianth or corona that appear in radial rather than concentric bands, or in a flare from the base, or in flecks or splashes, start with a letter for the predominant colour; proceed with an oblique line; follow with the letter(s) (in any order) for the non-predominant colour(s).

For example, a yellow flower with a white streak along the midrib of the perianth segments would be Y/W-Y; a white flower with radial bands of orange and yellow on the corona segments would be W-W/OY.

5. Colour Chart numbers in registered descriptions

eg 37D in 'Battersby', as "C^oe ce—," in the perianth

 2 -
 (Jackson's Daf odils, 1998) Jackson's Daf odils, 2007
 Sdlg 251/98 × sdlg 101/91
 Fl. rounded, 104 mm wide; perianth segments 43 mm
 long roundish in outline, blunt at apex, vivid yellow
 9B, spreading plane, with margins incurved, smooth
 and of heavy substance, overlapping half or more; the
 inner segments narrower; corona 28 mm long
 cup-shaped, ribbed, red (30C), mouth straight, with
 rim dentate. Mid-season to late
