

renate

- abaxial* on the upper or adaxial side of a surface
- abaxial* used of the perianth, petaloid or corona segments; see illustration
- abaxial* away from the axis or centre
- adaxial* towards the axis or centre
- adaxial* used of the corona; see illustration
- anther* the pollen-bearing part of the stamen
- anther* having a direction upwards, with an oblique base
- axial* located along the axis
- abaxial* on the lower or abaxial side of a surface
- abaxial* with perianth segments predominantly white and corona predominantly yellow (cf reverse bicolor da odil)
- anther* rounded enough for an angle of 90° to be placed inside. Used of the perianth, petaloid or corona segments; see illustration
- anther* used of the corona; see illustration
- anther* bell-shaped
- anther* around the axis or centre
- anther* used of the perianth, petaloid or corona segments; see illustration
- anther* encircling a common centre
- anther* used of the perianth, petaloid or corona segments; see illustration
- anther* the “trumpet” or “cup”
- anther* used of the corona rim; see illustration
- anther* a taxon of cultivated plants which is clearly distinct, uniform and stable in its characteristics and which, when propagated by appropriate means, retains those characteristics
- anther* the defining part of a name that denotes a cultivar
- anther* used of the corona; see illustration
- anther* tapering abruptly to a point
- anther* used of the corona; see illustration
- anther* used of the corona rim; see illustration
- anther* used of the corona; see illustration
- anther* of an anther, attached more or less centrally to the filament
- anther* used of the outline of the

with perianth segments predominantly yellow and corona predominantly white
used largely of the corona; see illustration
used of the corona rim; see illustration
used of the outline of the flower: see illustration
